

THE MOBILE MEETING ROOM

Gustafs Gpod is the truly mobile workspace for comfort and privacy. A space for undisturbed working and meetings up to four persons. The world class sound insulation blocks the sound and your conversations can absolutely not be heard from the outside - privacy proof! We use Gustafs unique Nano technique for a superb interior sound absorption and the high capacity air refreshment system is so silent you won't notice it. That's comfortable working and perfect for tasks that require your concentration or when making important decisions.

WORLD WIDE REFERENCES

After years of international business experience, we know how to support, drive and take care of the whole process for optimal customer satisfaction. Contracting Gustafs is a reliable.

GREEN GUSTAFS

Surrounded by the beautiful landscape in central Sweden, it's natural for us to take care of the environment. That's why our factory has a pro-active environmental program and use renewable energy only!

SUSTAINABILITY

Gustafs Gpod is sturdy, it's mobile and it's flexible regarding placement and furniture layouts for all your future needs and an overall long lifetime. The surface materials used in our Gpod contain 94% recycled materials, with 17% coming from post-consumer goods. In case you care, or have a LEED or BREEAM building!

FIRE

For decades Gustafs products have been synonymous with fire safety. All Gpods have non-combustible surfaces, A2-s1,d0. For your safety. No sprinklers needed!

ACOUSTICS

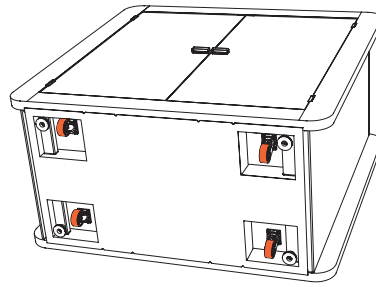

We always design for eyes but also for ears and have for example supplied the world's most famous concert halls and royal music academies. Using our knowledge from large architectural projects, we have created the most comfortable and private small workspaces for your office.

FEATURES

WORLD CLASS ACOUSTICS

Due to our unique Nano perforation we can combine beautiful wooden surfaces with great sound absorbing coefficients for comfortable conversations, face to face or by video. The superb sound blocking qualities makes our pod private proof and the super silent high airflow ventilation system completes the total acoustic experience – for many hours of relaxed and joyful working.

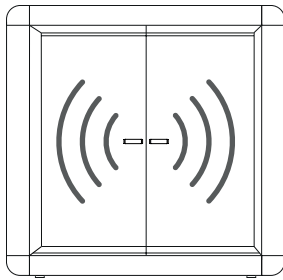

FLEXIBLE PLACEMENT

If it isn't mobile, it's not a pod. With integral wheels, the Gustafs Gpod is easily moved around with a precise positioning, and you can simply and quickly reposition it anytime you want. The power inlet options are multi-universal and the double doors do not only allow an easy entrance, there is no right or left version of our Gpod. Place it anywhere you want!

DESIGN

Our Gpod is the result of more than 100 years experience of Scandinavian wood design. The design is simple and timeless, but the robust timber frame design gives it a unique and exclusive appearance and the transition from the wooden frame to the glass is completely seamless. The design is underlined by only using the best natural materials and we craft them with care, for an outstanding quality and finish.

PRIVACY PROOF

The soundproof qualities of Gustafs Gpod are at least as important as the comfortable acoustics inside the Gpod. In fact, you can place the Gustafs Gpod next to a workstation in the middle of an office and people working next to the Gpod will not be able to hear the discussions taking place inside. Gustafs Gpod is both a private workspace and a place to seal the deal. Both a room for important thoughts and important decisions.

THE INTELLIGENT POD

Our Gpod is equipped with the Ochno Technology System. Lights and fans are automatically controlled by a sensor so that they adapt to how the pods are used. These parameters can also be set and adjusted for when no one is in the pod, when people are inside or with delays after usage. Automatic control can be over-ruled by app or direct with the elegant dimmers on the pod's inner walls. Gpod is the first intelligent cellular workspace in the world. A modern pod, for modern workspaces.

FLEXIBLE LAYOUTS

The Gpod is available with many configurations and the good thing is that you can change it any time, in case your needs change over time. Our pod is quickly transformed from conference room, to meeting room, to coffee room or a working room for one or two. Of course all lay-outs have height adjustable tables and seating solutions, in case you appreciate to vary your working position. We know the value of good ergonomics and active working!

	Inside ceiling: Gustafs Stripes RP8-C20	w 0,65-C NRC 0,7
	Inside flooring: Sound absorbing carpet	w 0,30-D NRC 0,45
Sound proof	<p>The sound insulation of Gpod is great and they can be placed next to other workstations in the middle of an office and people working next to the pods will not be able to hear discussions taking place in them. Conversations inside Gpod can be made 100% discrete.</p> <p>We prefer not to give out the results of sound insulation measurements done to our product. At the moment, there isn't a standardized test for measuring the sound insulation of small enclosed spaces like Gpod. The sound insulation of a Gpod also varies depending on measuring sound coming out from the Gpod and sound entering the Gpod and there are no standardized tests covering this phenomenon. That is why existing acoustical ratings are not a good reflection of the experience using a Gpod. We recommend you try a Gpod in order to evaluate whether our products' sound insulation is sufficient to meet your needs.</p>	
DoP	Available	
LEED	TVOC	approved emissions (EN ISO 16000-9)
	Formaldehyde	approved emissions (EN 717-1) No added urea formaldehyde
	Recycled Material	Wall materials in 17% Post Consumer
